## UNITED NATIONS ECONOMIC COMMISSION FOR EUROPE

The United Nations Economic Commission for Europe (UNECE) is one of the 5 United Nations regional commissions, administered by the Economic and Social Council (ECOSOC). It was established in 1947 with the mandate to help rebuild post-war Europe, develop economic activity and strengthen economic relations among European countries, and between Europe and the rest of the world. During the Cold War, UNECE served as a unique forum for economic dialogue and cooperation between East and West. Despite the complexity of this period, significant achievements were made, with consensus reached on numerous harmonization and standardization agreements.

In the post-Cold War era, UNECE acquired not only many new member States, but also new functions. Since the early 1990s the organization has focused on assisting the countries of Central and Eastern Europe, Caucasus and Central Asia with their transition process and their integration into the global economy.

Today, UNECE supports its 56 member States in Europe, Central Asia and North America in the implementation of the 2030 Agenda for Sustainable Development with its Sustainable Development Goals (SDGs). UNECE provides a multilateral platform for policy dialogue, the development of international legal instruments, norms and standards, the exchange of best practices and economic and technical expertise, as well as technical cooperation for countries with economies in transition.

The norms, standards and conventions developed at UNECE in the areas of environment, transport, trade, statistics, energy, forestry, housing, and land management, innovation or population, offer practical tools to improve people's daily lives. Many are used worldwide, and a number of countries from outside the region participate in UNECE's work.

UNECE's multisectoral approach helps countries to tackle the interconnected challenges of sustainable development in an integrated manner, with a transboundary focus that helps devise solutions to shared challenges. With its unique convening power, UNECE fosters cooperation among all stakeholders at the country and regional levels.

## TRANSPORT IN UNECE

Today, UNECE services 60 United Nations inland transport legal instruments. Several of the legal instruments are global either by design or because their success has caused them to grow beyond the ECE region. In addition to negotiating the amendments to existing legal instruments, UNECE has been active in facilitating new legal instruments. Its normative activities are enhanced with developing methodologies, guidelines, and definitions on subjects such as transport planning, data collection and the collection of transport statistics. UNECE's work on transport is governed by the Inland Transport Committee (ITC) and its 21 Working Parties, which are in turn supported by more than 40 formal and informal expert groups and in cooperation with 9 treaty bodies (Administrative Committees). Annual sessions of ITC are the key moments of this comprehensive intergovernmental work, when the results from all subsidiary bodies, as well as the UNECE Sustainable Transport Division, are presented to ITC members and contracting parties.

In addition to servicing ITC and its subsidiary bodies, the Division also services other intergovernmental bodies including the ECOSOC Committee of Experts on the Transport of Dangerous Goods and on the Globally Harmonized System of Classification and Labelling of Chemicals, as well as 9 treaty bodies of United Nations legal instruments and the TIR Executive Board. In cooperation with UNESCAP, UNECE Sustainable Transport Division supports the United Nations Special Programme for the Economies of Central Asia (SPECA). It also annually alternates with UNESCAP as the secretariat to the SPECA Thematic Working Group on Sustainable Transport, Transit and Connectivity. In cooperation with the UNECE Environment Division and WHO Europe, the Division services the Transport, Health and Environment Pan-European Programme (THE PEP). It ensures the management and oversight of the Trans-European North-South Motorway (TEM) and the Trans-European Railway (TER) projects. The Division supports the accession to and implementation of the UN legal instruments through policy dialogues, technical assistance, and analytical activities with the priority of promoting regional and subregional cooperation and capacity-building. Finally, since 2015, UNECE hosts the secretariat of the United Nations Secretary-General's Special Envoy for Road Safety and since 2018 the secretariat of the United Nations Road Safety Fund (UNRSF).

## Table I Tables by country

The table below provides an overview of data availability of various countries for each table, presented in the following chapters.

**Table I Tables by country (cont'd)**

## INTRODUCTION

Every year, approximately 90,000 people are killed in road traffic accidents in the ECE region. Target 3.6 of the 2030 Agenda for Sustainable Development had the aim of halving the overall number of road deaths by 2020 compared to 2010. In September 2020, the United Nations General Assembly (resolution A/RES/74/299), initiated a second Decade of Action for Road Safety 2021–2030 with the explicit target to reduce road deaths and injuries by at least fifty per cent during this period.

The data presented in this publication is used to monitor progress towards the corresponding target 3.6 of SDG 3: *By 2030 halve the number of global deaths and injuries from road traffic accidents*; as well as target 9.1 of SDG 9: *Develop quality, reliable, sustainable and resilient infrastructure, including regional and trans-border infrastructure, to support economic development and human well-being, with a focus on affordable and equitable access for all*; and target 11.2 of SDG 11: *By 2030 provide access to safe, affordable, accessible and sustainable transport systems for all, improving road safety, notably by expanding public transport, with special attention to the needs of those in vulnerable situations, women, children, persons with disabilities and older persons*.

With the objective of aiding countries in monitoring accident occurrences, identifying patterns, and devising strategies for enhancing road safety within the ECE region, the UNECE releases the “Statistics of Road Traffic Accidents in Europe and North America” every two years. This data-driven publication provides a comprehensive overview of fatalities and injuries caused by road traffic accidents.

The fifty-seventh edition of this publication is purely statistical in character and is limited to road traffic accidents involving personal injuries. Incidents that solely entail vehicle damage are excluded from the analysis.

Part I of the report presents an overview of road traffic accidents trends in the ECE region for the years 2011–2021. It also includes charts and summary tables depicting the overall trends related to road injuries and casualties. The emphasis is placed on key metrics such as the number of accidents, fatalities, injuries, and mortality rates.

In part II of the report, accidents, fatalities and injuries are provided in more detail by country. These are organized in three tables as follows:

1. Accidents, fatalities and injured persons by location, time of occurrence and road conditions.
2. Accidents, fatalities and injuries by nature of the accident, such as accidents between vehicles, rear-end collisions, head-on collisions, and collisions at level crossings.
3. Fatalities and injuries by gender and age groups.

Part III presents background statistics such as the road vehicle fleet, vehicle kilometres run and population distribution by age groups.

While this publication highlights the main variables concerning road traffic accidents deaths and injuries, it does not encompass all possible road traffic accidents outcomes. Its primary focus is to present an overview of the most significant findings. For complete details on road traffic accidents, please refer to the **Road Safety statistics** available online on the UNECE’s regularly updated Transport Statistics Database.

## Sources

The report was compiled by the Secretariat of UNECE on the basis of replies to questionnaires submitted by member countries and from official national and international sources as of August 2023. Data for the majority of European Union (EU) member States and European Free Trade Association countries came from the European Commission CARE database.

## UNECE member countries and nomenclature

As of August 2023, the UNECE is composed of the following 56 member countries:

Albania, Andorra, Armenia, Austria, Azerbaijan, Belarus, Belgium, Bosnia and Herzegovina, Bulgaria, Canada, Croatia, Cyprus, Czechia, Denmark, Estonia, Finland, France, Georgia, Germany, Greece, Hungary, Iceland, Ireland, Israel, Italy, Kazakhstan, Kyrgyzstan, Latvia, Liechtenstein, Lithuania, Luxembourg, Malta, Monaco, Montenegro, Netherlands, North Macedonia, Norway, Poland, Portugal, Republic of Moldova, Romania, Russian Federation, San Marino, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Tajikistan, Türkiye, Turkmenistan, Ukraine, United Kingdom of Great Britain and Northern Ireland, United States of America and Uzbekistan.

## Comparability and limitations of data

The UNECE, in collaboration with Eurostat and the International Transport Forum, has made efforts to minimize the differences in reporting between countries through the publication and regular updates of the Glossary for Transport Statistics, the fifth edition of which is available at [www.unece.org/index.php?id=52120](http://www.unece.org/index.php?id=52120).

The data adhere to the commonly agreed upon definitions from the Glossary as approved by the UNECE Inland Transport Committee (see annex). Footnotes within the tables indicate instances where countries have provided explanations for deviations from these definitions.

The comparability of data is also subject to variations in road accident reporting standards. Notably, the number of accidents and the number of injuries may be underreported in some countries due to administrative or practical limitations. In particular, the data for injuries have the largest comparability challenges between countries.

It should be highlighted that Part II of this report includes responses to the questionnaires provided by the participating countries, reflecting their most recent available data. Consequently, the latest available year for data varies between 2020 and 2022.

While nearly all countries provide data on total fatalities and injured persons, not all of them report a complete breakdown of these data into the detailed categories presented in this publication. As a result, there are cases where the sum of disaggregated data does not align with the totals for categories.

## Rounding

Where necessary, each figure has been rounded off to the nearest whole number. For this reason, some discrepancies may appear between the sum of the constituent items and the totals shown.

## Time period

Most of the statistics are presented in the form of time series. In general, the data for the latest year should be considered provisional while those of previous years are final.

## Data inquiries

Comments or enquiries are welcome and should be addressed to: [stat.trans@un.org](mailto:stat.trans@un.org).

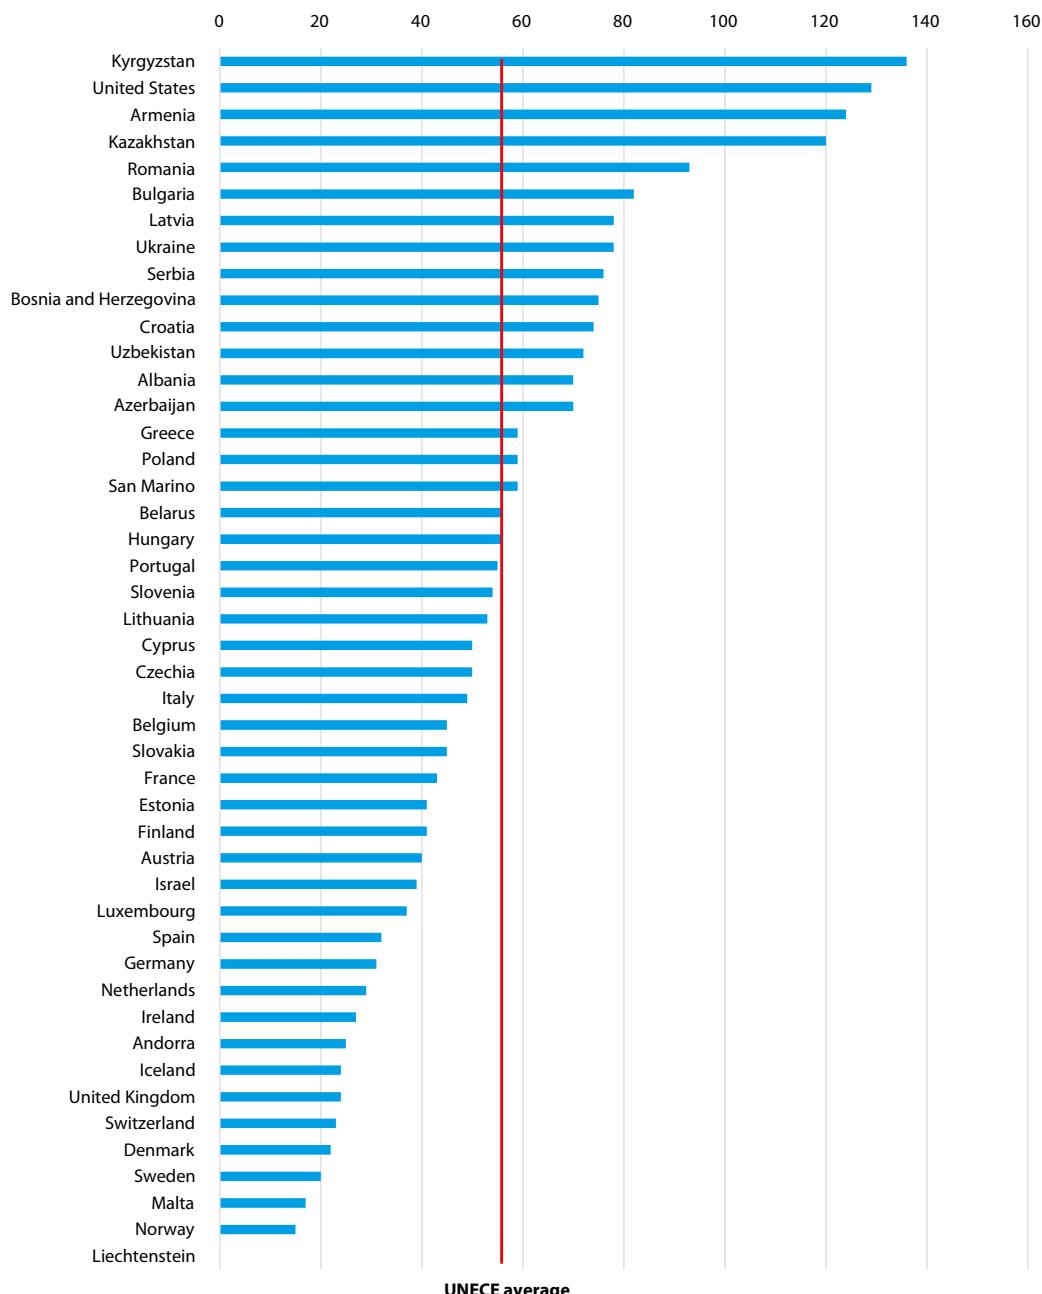

## ROAD SAFETY IN THE ECE REGION

According to the UNECE data for the year 2021, significant disparities exist in road traffic accident fatality and injury rates among UNECE member States, as illustrated in figures I and II, respectively. These figures underscore the variations in road safety metrics across the region.

The United States of America has one of the highest fatality rates and the highest injury rate, both of which are considerably above the regional average. Some countries, such as Austria, exhibit a unique profile of *low fatality-high injury* rates. This suggests that while fewer accidents in these countries may result in death, a larger number result in injuries. Conversely, countries like Kazakhstan and Uzbekistan demonstrate *high fatality-low injury* rates, indicating that accidents in these nations are more likely to be fatal when they occur.

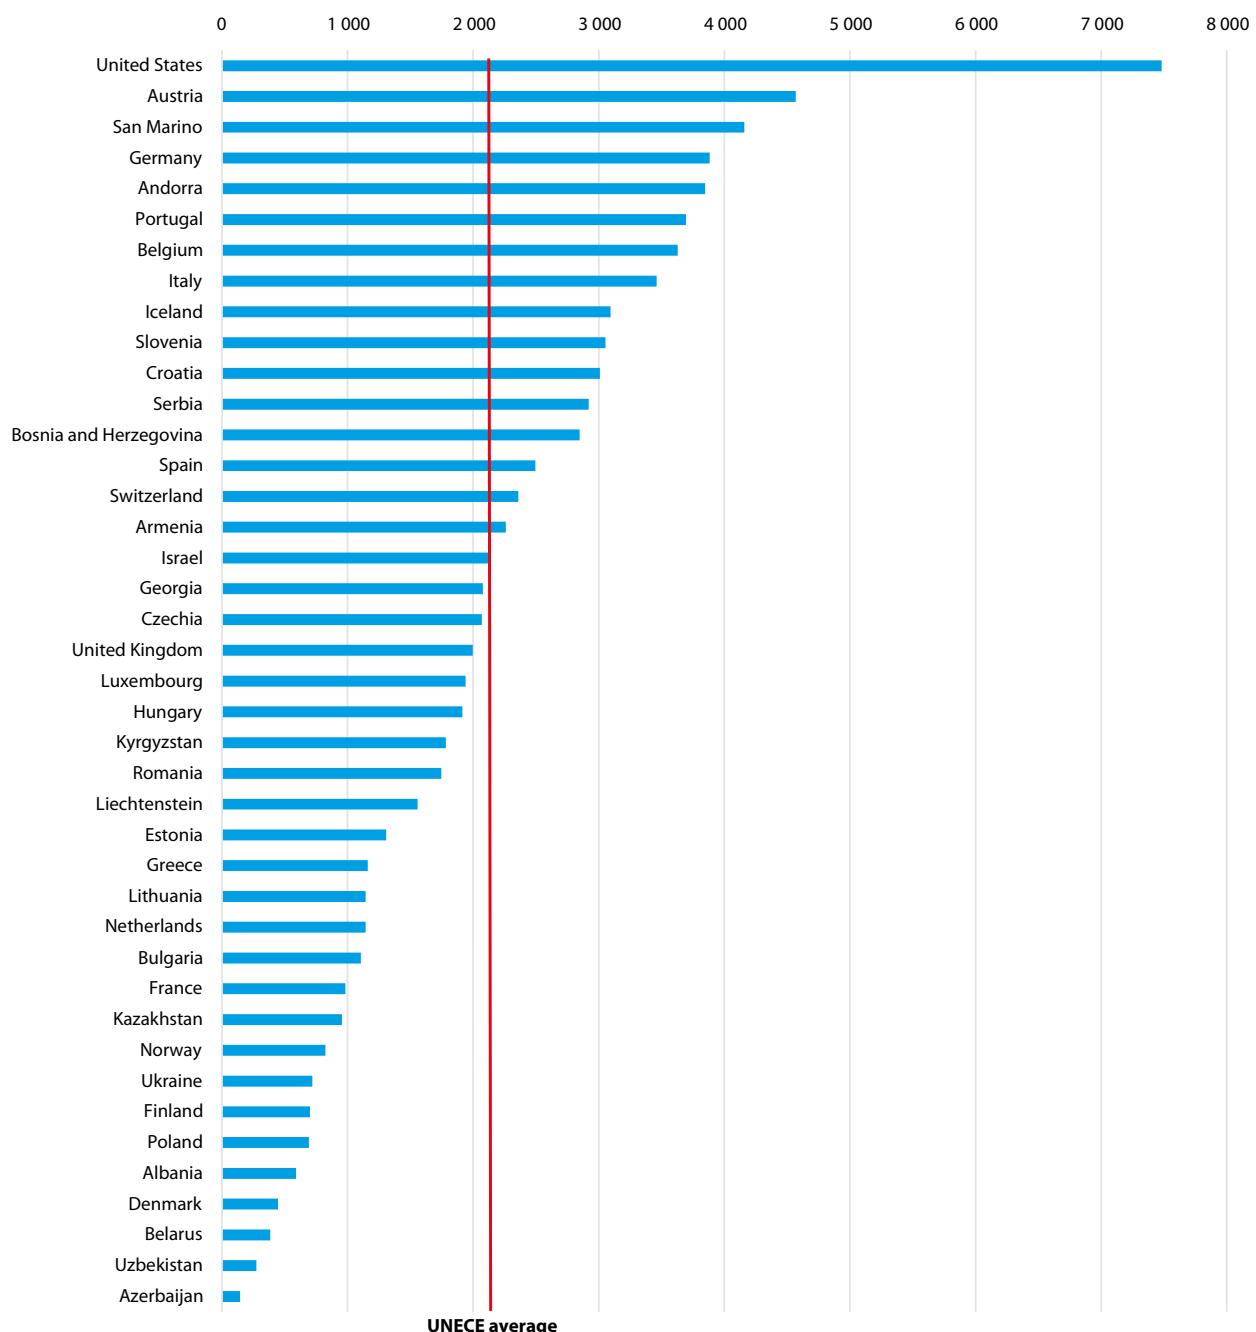

Countries in the EU and the European Free Trade Association, continued to report low fatality and injury rates, such as Norway and Sweden, indicating that road safety measures in these countries are more effective.

### Reduction in road traffic fatalities and injuries did not align with the SDG target

While there has been modest progress in reducing road traffic fatalities and injuries in the ECE region, the improvements are limited. From 2010 to 2021, road fatalities decreased by only 5.3% in UNECE countries with available data. Much better improvement is observed in the ECE region excluding North America, mainly due to the large and constant fatalities in the United States of America. In the ECE region, excluding North America, the road fatalities decreased by 28.8%.

It is worth noting that a relatively large decline in road traffic fatalities was observed in 2020, likely attributable to reduced traffic during pandemic lockdowns. However, these numbers rebounded in 2021, approaching or even exceeding pre-pandemic levels in numerous UNECE countries. However, the rebound effect is likely to be short-term, and we expect to see decreasing trend again in the coming years.

Although the long-term decrease represents a step in the right direction, it falls short of the objectives set out in SDG target 3.6. This target aimed to halve the number of global deaths and injuries from road traffic accidents by 2020. The progress in the ECE region has not met this benchmark.

**Figure IV Road traffic fatalities in ECE region**

Source: UNECE Transport Database.

Notes: 49 countries with available data for the period 2010-2021 are included in the calculation. Countries with inconsistent time series data are excluded.

Focusing on the goal of halving road traffic accidents fatalities, it is noteworthy that several countries within the ECE region have effectively realized this reduction between 2010 and 2020, as illustrated in table I. This table provides the percentage change in road traffic accidents fatalities during this period for countries that achieved the most substantial decreases by percentage. The most notable decrease occurred in Turkmenistan, where fatalities dropped by 63 per cent, followed by Norway, Greece, Belarus, and Andorra.

**Table II Ten largest percentage decreases in road traffic fatalities, 2010-2020**

Country	Change per cent
Turkmenistan	-63
Norway	-55
Greece	-54
Belarus	-52
Andorra	-50
Montenegro	-49
Albania	-49
Republic of Moldova	-46
Croatia	-44
Spain	-43

### Road traffic accidents involving vulnerable road users

As previously highlighted, there has been a general decline in road traffic accidents fatalities across countries in the ECE region. However, the rate of this decline varies significantly when comparing fatalities involving vulnerable road users (VRUs) – which include pedestrians, cyclists, and motorcyclists – to those involving passenger car users.

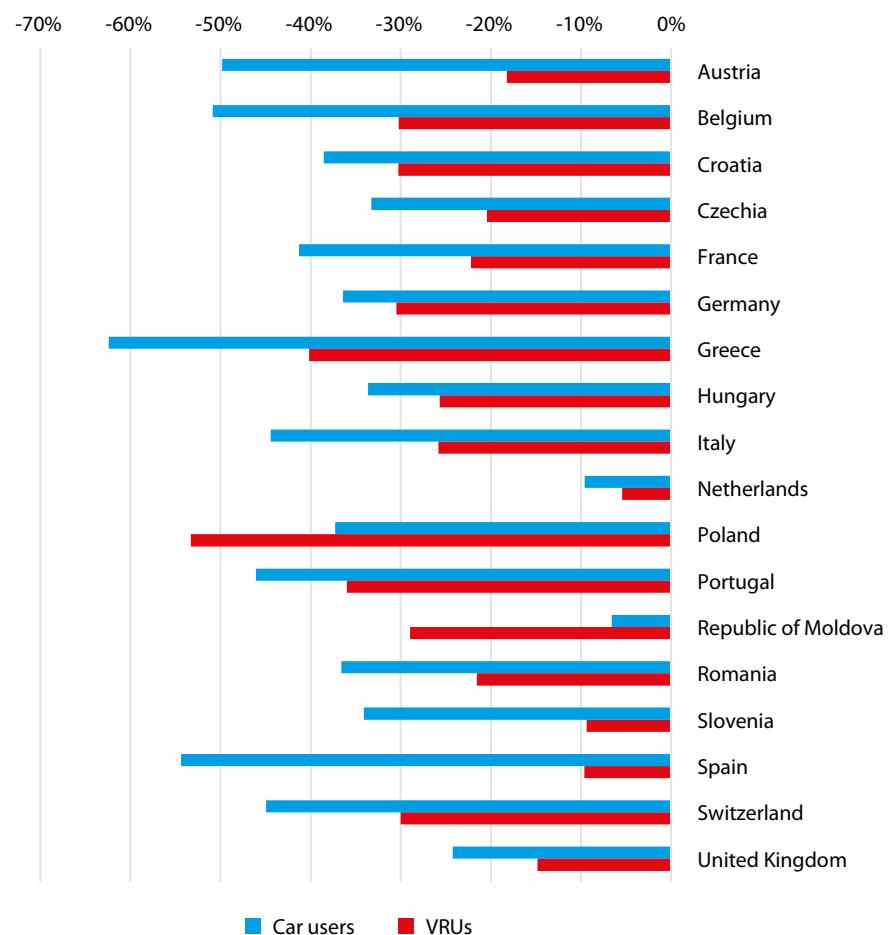

As demonstrated in figure V, the general trend indicates a more substantial reduction in fatalities among car users compared to VRUs in many countries. Poland is an exception, with a higher rate of reduction for VRUs (-53%) than for car users (-37%). Another notable deviation is the Republic of Moldova, where the decrease in fatalities among VRUs (-29%) surpasses that among car users.

In contrast, countries like the Netherlands and the United Kingdom exhibit a smaller reduction in fatalities across both categories. However, the gap between the rates of reduction for car users and VRUs in these countries is also narrower. On the other hand, in countries such as Spain and Slovenia, the difference between the reduction rates is remarkably large.

While these observations are instructive, they should be interpreted cautiously. One potential issue is the underreporting of VRU-related fatalities, which could skew the overall understanding of these trends. Additionally, the COVID-19 pandemic may have led to an increase in the number of VRUs, particularly cyclists. This could, in turn, result in higher fatality rates within this group, especially if road infrastructure and safety measures have not adapted to accommodate the change.

Despite these complexities, it is widely acknowledged that car users benefit more from modern vehicle safety features. Furthermore, many countries may have prioritized road safety measures that predominantly benefit car users.

### NOTES TO TABLE D

#### Country notes

**Netherlands:** Injured persons refer to persons who were hospitalized.

**Türkiye:** Until 2015 figures on persons killed include the deaths only at the accident scene. Since 2015 figures on persons killed also include the deaths within 30 days after the traffic accidents due to related accident and its impacts for people injured and sent to health facilities.

### NOTES TO TABLE 2

#### Country notes

**Netherlands:** Injured persons refer to persons who were hospitalized.

**North Macedonia:** Starting from 1 January 2020, a new database for road traffic accidents is in use in the Ministry of Internal Affairs, North Macedonia. This assigns several natures of accident for a single traffic accident. That is why the breakdown of the number of road traffic accidents, fatalities and injuries by nature of accident do not add up to the total.

### NOTES TO TABLE 3

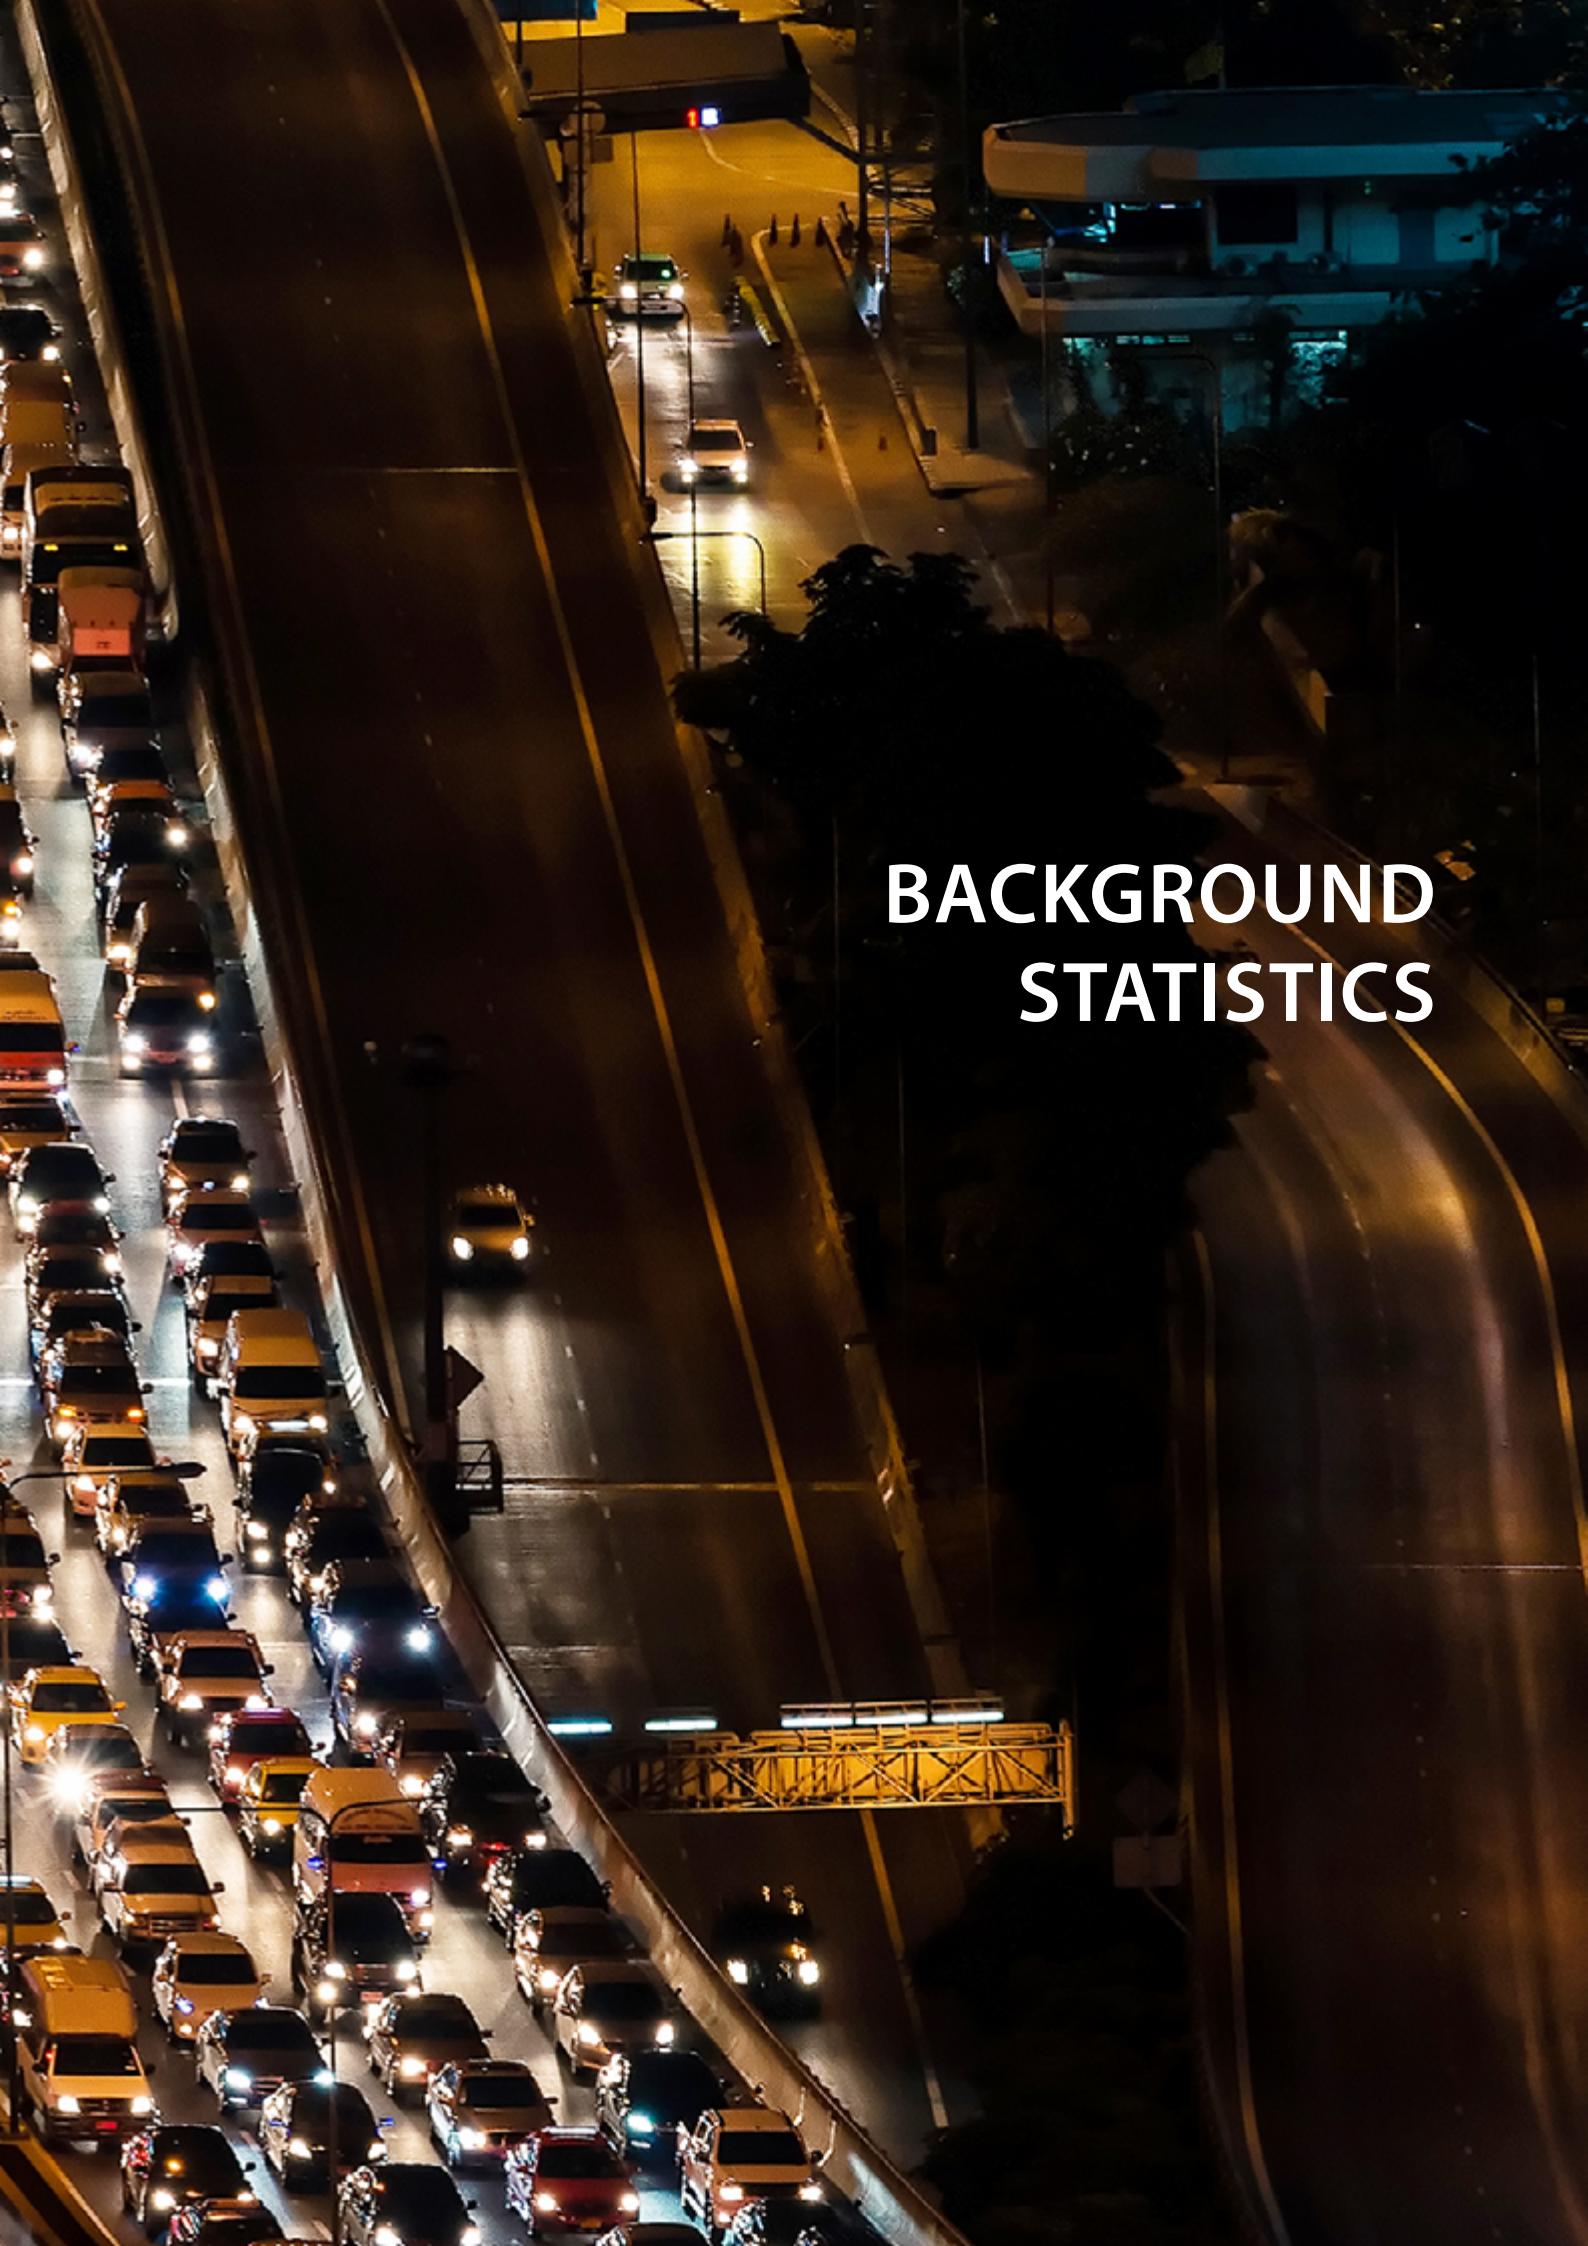

#### Country notes

**Canada:** Unknown genders are classified as male.

**Georgia:** "<6 years" refer to "0-7 years". "10-14 years" refer to "8-16 years". "21-24 years" refer to "17-25 years". "25-64 years" refer to "26-60 years". "65 years and over" refer to "more than 60 years". The data on accidents by age is provided for the accidents registered by the Patrol Police Department of the Ministry of Internal Affairs of Georgia.

**Netherlands:** Injured persons refer to persons who were hospitalized.

An aerial photograph of a multi-lane highway at night. The scene is dominated by the warm, glowing lights of numerous vehicles, primarily cars and trucks, whose headlights and tail lights create a dense pattern of light points against the dark asphalt. The highway is flanked by concrete barriers and overpasses, with some greenery visible on the right side. The perspective is from above, looking down the length of the road.

# BACKGROUND STATISTICS

## 4. Road vehicle fleet

### NOTES TO TABLE 5

#### Country notes

- Bulgaria :** "Vehicle-kilometres" refers to only vehicles with national registration. "Vehicles-kilometres" for "Lorries and road tractors" refers to only vehicles above 6 tonnes.
- Ireland :** "Vehicle-kilometres" refers to only vehicles with national registration.
- Italy :** Refers to motorway traffic only.
- Netherlands :** "Vehicle-kilometres" excludes foreign motorcycles on national territory and "vehicle-kilometres" of "Lorries and road tractors" includes special purpose vehicles.
- Poland :** "Vehicle kilometres" for "Motorcycles" and "Motor coaches, Buses, etc." exclude foreign vehicles.
- Slovenia :** "Motor vehicle movements on national territory, irrespective of country of registration" refers to public transport only.
- Switzerland:** "Vehicle-kilometres" of "motorcycles" includes mopeds.
- Türkiye :** Does not include travel on urban roads.
- United Kingdom:** Refers to Great Britain. Light vans are included in "Lorries and road tractors".

An aerial photograph of a modern highway interchange. The interchange features multiple levels of elevated roads and ramps, all surrounded by a lush green landscape with young trees and grass. In the background, a dense urban area with numerous buildings and industrial structures is visible under a clear blue sky.

Annex

## DEFINITIONS<sup>1</sup> AND GENERAL NOTES

### A. Definitions relevant to the tables of this Bulletin

**Injury accident:** Any accident involving at least one road vehicle in motion on a public road or private road to which the public has right of access, resulting in at least one injured or killed person.

*A suicide or an attempted suicide is not an accident but an incident caused by a deliberate act to injure oneself fatally. However, if a suicide or an attempted suicide causes injury to another road user, then the incident is regarded as an injury accident.*

*Included are: collisions between road vehicles; between road vehicles and pedestrians; between road vehicles and animals or fixed obstacles and with one road vehicle alone. Included are collisions between road and rail vehicles. Multi-vehicle collisions are counted as only one accident provided that any successive collisions happen at very short intervals. Injury accident excludes accidents incurring only material damage.*

*Excluded are terrorist acts.*

**Fatal accident:** Any injury accident resulting in a person killed.

**Non-fatal accident:** Any injury accident other than a fatal accident.

**Casualty:** Any person killed or injured as a result of an injury accident.

**Person killed:** Any person killed immediately or dying within 30 days as a result of an injury accident, excluding suicides.

*A killed person is excluded if the competent authority declares the cause of death to be suicide, i.e. a deliberate act to injure oneself resulting in death. For countries that do not apply the threshold of 30 days, conversion coefficients are estimated so that comparisons on the basis of the 30 day-definition can be made.*

**Person injured:** Any person who as result of an injury accident was not killed immediately or not dying within 30 days, but sustained an injury, normally needing medical treatment, excluding attempted suicides.

*Persons with lesser wounds, such as minor cuts and bruises are not normally recorded as injured.*

*An injured person is excluded if the competent authority declares the cause of the injury to be attempted suicide by that person, i.e. a deliberate act to injure oneself resulting in injury, but not in death.*

**Person seriously injured:** Any person injured who was hospitalized for a period of more than 24 hours.

**Person slightly injured:** Any person injured excluding persons killed or seriously injured.

*Persons with lesser wounds, such as minor cuts and bruises are not normally recorded as injured.*

**Accident between road vehicle and pedestrian:** Any injury accident involving one or more road vehicle and one or more pedestrian.

*Included are accidents irrespective of whether a pedestrian was involved in the first or a later phase of the accident and whether a pedestrian was injured or killed on or off the road.*

---

<sup>1</sup> Definitions are adapted from the Illustrated Glossary for Transport Statistics, Fifth Edition published in 2019 ([www.unece.org/fileadmin/DAM/trans/main/wp6/pdfdocs/Glossary\\_for\\_Transport\\_Statistics\\_EN.pdf](http://www.unece.org/fileadmin/DAM/trans/main/wp6/pdfdocs/Glossary_for_Transport_Statistics_EN.pdf)).

**Single road vehicle accident:** Any injury accident in which only one road vehicle is involved.

*Included are accidents of vehicles trying to avoid collision and veering off the road, or accidents caused by collision with obstruction or animals on the road. Excluded are collisions with pedestrians and parked vehicles.*

**Multi-vehicle road accident:** Any injury accident involving two or more road vehicles only.

The following types of injury accidents involving two or more road vehicles are:

(a) **Rear-end collision:** collision with another vehicle using the same lane of a carriageway and moving in the same direction, slowing or temporarily halted.

*Excluded are collisions with parked vehicles.*

(b) **Head-on collision:** collision with another vehicle using the same lane of a carriageway and moving in the opposite direction, slowing or temporarily halted.

*Excluded are collisions with parked vehicles.*

(c) **Collision due to crossing or turning:** collision with another vehicle moving in a lateral direction due to crossing, leaving or entering a road.

*Excluded are collisions with vehicles halted and waiting to turn which should be classified under (a) or (b).*

(d) **Other collisions, including collisions with parked vehicles:** collision occurring when driving side by side, overtaking or when changing lanes; or collision with a vehicle which has parked or stopped at the edge of a carriageway, on shoulders, marked parking spaces, footpaths or parking sites, etc.

*Included in (d) are all collisions not covered by (a), (b) and (c). The constituent element for classification of accidents between vehicles is the first collision on the carriageway, or the first mechanical impact on the vehicle.*

## B. Other definitions

**Road outside built-up areas:** Road outside the boundaries of a built-up area, which is an area with entries and exits sign-posted as such.

*Motorways are excluded.*

**Dry road surface:** A road surface not covered by water, snow, ice or other substances.

**Other road surface:** Any other road surface other than a dry road surface.

**Motorway/freeway:** Road, specially designed and built for motor traffic, which does not serve properties bordering on it, and which:

(a) Is provided, except at special points or temporarily, with separate carriageways for traffic in two directions, separated from each other, either by a dividing strip not intended for traffic, or exceptionally by other means;

(b) Has no crossings at the same level with any road, railway or tramway track, or footpath;

(c) Is specially sign-posted as a motorway and is reserved for specific categories of road motor vehicles.

*Entry and exit lanes of motorways are included irrespective of the location of the sign-posts.*

*Urban motorways are also included.*

**Road inside a built-up area:** A road within the boundaries of a built-up area, with entries and exits sign-posted as such.

*Excluded are motorways, express roads and other roads of higher speed traversing the built-up area, if not signposted as built-up roads. Streets are included.*

**Road vehicle:** A vehicle running on wheels and intended for use on roads.

**Road motor vehicle:** A road vehicle fitted with an engine whence it derives its sole means of propulsion, which is normally used for carrying persons or goods by road, or for hauling, on the road, vehicles used for the carriage of persons or goods.

**Moped:** Two, three or four-wheeled road motor vehicle which is fitted with an engine having a cylinder capacity of less than 50cc and a maximum authorized design speed in accordance with national regulations. Where limitations concerning the engine displacement are not applicable a restriction in terms of motor power may be in force. Refers to categories L<sub>1</sub> and L<sub>2</sub> of the UN Consolidated Resolution on the Construction of Vehicles (R.E.3).

*Registered and non-registered mopeds in use are included, whether or not they have a number plate. Some countries do not register all mopeds.*

**Motor cycle:** Two-, three- or four-wheeled road motor vehicle not exceeding 400 kg of unladen weight. All such vehicles with a cylinder capacity of 50 cc or over are included, as are those under 50 cc which do not meet the definition of moped. Refers to categories L<sub>3</sub>, L<sub>4</sub>, L<sub>5</sub>, L<sub>6</sub> and L<sub>7</sub> of the UN Consolidated Resolution on the Construction of Vehicles (R.E.3).

**Passenger car:** Road motor vehicle, other than a moped or a motor cycle intended for the carriage of passengers and designed to seat no more than nine persons (including the driver). Refers to category M<sub>1</sub> of the UN Consolidated Resolution on the Construction of Vehicles (R.E.3).

*Included are:*

- (a) Passenger cars
- (b) Vans designed and used primarily for transport of passengers
- (c) Taxis
- (d) Hire cars
- (e) Ambulances
- (f) Motor homes.

*Excluded are light goods road vehicles (see definition below) as well as buses, coaches and trolleybuses (see definition below).*

*"Passenger car" includes microcars (needing no permit or having the same requirements as mopeds to be driven), taxis and passenger hire cars, provided that they have fewer than ten seats.*

**Buses, coaches and trolleybuses:** Passenger road motor vehicle designed to carry 10 or more seated or standing persons (including the driver) and is not rail-borne. Refers to categories M<sub>2</sub> and M<sub>3</sub> of the UN Consolidated Resolution on the Construction of Vehicles (R.E.3).

**Goods road vehicle:** Road vehicle designed, exclusively or primarily, to carry goods. Includes categories N and O of the UN Consolidated Resolution on the Construction of Vehicles (R.E. 3).

*Included are:*

- (a) *Light goods road vehicles with a gross vehicle weight of not more than 3 500 kg, designed exclusively or primarily, to carry goods or to be used by craftsmen, e.g. vans, pick-ups, and two- or three-wheeled vehicles;*
- (b) *Heavy goods road vehicles with a gross vehicle weight above 3 500 kg, designed, exclusively or primarily, to carry goods;*
- (c) *Road tractors;*
- (d) *Trailers and semi-trailers;*
- (e) *Agricultural tractors permitted to use roads open to public traffic.*

**Goods road motor vehicle:** Any single road motor vehicle designed to carry goods (e.g. a lorry), or any coupled combination of road vehicles designed to carry goods (i.e. lorry with trailer(s), or road tractor with or without semi-trailer and with or without trailer).

**Lorry/Truck:** Rigid road motor vehicle designed, exclusively or primarily, to carry goods.

**Road tractor (semi-trailer tractor):** Road motor vehicle designed, exclusively or primarily, to haul other road vehicles which are not power-driven (mainly semi-trailers).

*Agricultural tractors are excluded.*

**Gross vehicle weight (Legally permissible maximum weight):** Total of the weight of the vehicle (or combination of vehicles) including its load when stationary and ready for the road declared permissible by the competent authority of the country of registration.

*This includes the weight of the driver and the maximum number of persons permitted to be carried.*

# 2023 Statistics of Road Traffic Accidents in Europe and North America

This publication provides comparable data on road traffic accidents in Europe, Canada and the United States. Data are organized by the nature of accident, and the number of persons killed or injured, by category or road user, age group and sex. As background data, figures on the number of road vehicles in use and vehicle-kilometers run by road vehicles are also provided along with estimates of population and distribution by age group. This publication contains important statistical information for those involved in road safety issues and the data directly monitor Sustainable Development Goal target 3.6.
