**2013 Public Transportation Fact Book
Appendix B: Transit Agency and Urbanized
Area Operating Statistics**

American Public Transportation Association
Washington, DC
May 2013

APTA's Vision Statement

Be the leading force in advancing public transportation.

APTA's Mission Statement

To strengthen and improve public transportation,
APTA serves and leads its diverse membership through
advocacy, innovation, and information sharing.

Prepared by

Matthew Dickens, Statistician

Material from *2013 Public Transportation Fact Book, Appendix B: Transit Agency and Urbanized Area Operating Statistics*, may be quoted or reproduced, without obtaining the permission of the American Public Transportation Association.

Suggested Identification: American Public Transportation Association: *2013 Public Transportation Fact Book, Appendix B: Transit Agency and Urbanized Area Operating Statistics*, Washington, DC, May, 2013.

Data presented in this publication are based on data published in the *National Transit Database*. Washington: Federal Transit Administration, 2013, at <http://www.ntdprogram.gov/ntdprogram/>

About the Fact Book

The American Public Transportation Association is a nonprofit international association of over 1,400 public and private member organizations including transit systems and commuter rail operators; planning, design, construction and finance firms; product and service providers; academic institutions; transit associations; and state departments of transportation. APTA members serve the public interest by providing safe, efficient and economical transit services and products. Over 90 percent of persons using public transportation in the United States and Canada are served by APTA members.

The **Public Transportation Fact Book** (formerly the **Transit Fact Book**) was first published in 1943. This is the fifth edition of a **Transit Agency and Urbanized Area Operating Statistics** volume to supplement the **Public Transportation Fact Book**. The tables in this volume arrange data in rank order for all transit agencies reported in the Federal Transit Administration's 2011 National Transit Database. These data are extensions of tables listing only the largest 50 agencies in different modes in the **Public Transportation Fact Book**. These data will allow all agencies that participate in the National Transit Database to determine other agencies of comparable size.

Note that all data included in this volume are extracted from the 2011 National Transit Database. The names and locations used to identify these transit agencies are as they appear in that publication. These data are presented because NTD data are not published in an easily extracted format where data can be sorted by agency or agency modal totals or urbanized area or urbanized area modal totals in size order.

The data are summed and ranked in four ways:

Agency Totals: Data for all modes operated by a transit agency are summed to a total. Tables 1 through 3.

Agency Modal Totals: Data are reported for each agency for each mode the agency operates. If both directly operated and purchased transportation service are reported for a single mode for an agency, those data are summed to a single number for the agency's total service for each mode. Tables 4 through 6.

Modes of service are listed by codes in the following order:

AR: Alaska Railroad

CB: Commuter Bus

CC: Cable Car

CR: Commuter Rail

DR: Demand Responsive Paratransit

DT: Demand Responsive Paratransit - Taxi

FB: Ferry Boat

HR: Heavy Rail

IP: Inclined Plane

LR: Light Rail

MB: Bus

MG: Monorail/Automated Guideway

PB: Publico

RB: Bus Rapid Transit

SR: Streetcar Rail

TB: Trolleybus

VP: Van Pool

YR: Hybrid Rail

Urbanized Area Totals: All service for all modes for all transit agencies in each urbanized area are summed to a total. Only urbanized areas for which transit service is reported are included on the table. *Note that the entire amount of service operated by a transit agency is included in the urbanized area in which its headquarters is located even if some of that service is operated in another urbanized area.* Tables 7 through 9.

Urbanized Area Modal Totals: All data for each mode for all transit agencies in each area are summed to give modal totals for each urbanized area. Only urbanized areas with a particular mode of service are listed under each modal category. *Note that the entire amount of service operated by a transit agency is included in the urbanized area in which its headquarters is located even if some of that service is operated in another urbanized area.* Tables 10 through 12.

Indexes are also provided, on tables 13 through 16, that list each transit agency alphabetically by state and name and each urbanized area by name. The indexes list, for modes and agency or urbanized area totals, the rank for each data item, thereby allowing the agency or urbanized area to be located on Tables 1 through 12.

Data are provided for six statistics listed in pairs:

Tables 1, 4, 7, and 10. Vehicles Operated Maximum Service and Vehicles Available for Maximum Service. The agencies are listed in the order of Vehicles Operated Maximum Service.

Tables 2, 5, 8, and 11. Annual Vehicle Revenue Miles and Annual Vehicle Revenue Hours. The agencies are listed in the order of Annual Vehicle Revenue Miles.

Tables 3, 6, 9, and 12. Unlinked Passenger Trips and Passenger Miles. The agencies are listed in the order of Unlinked Passenger Trips.

The **Public Transportation Fact Book** is published in three parts. This allows greater detail in statistical content and at the same time allows data to be easier to find and access. These parts are:

The **Public Transportation Fact Book** presents statistics describing the entire United States transit industry for 2011. Also included is a glossary of definitions of reported data items.

The **Public Transportation Fact Book, Appendix A: Historical Tables**, presents primary data items for the entire time period they have been reported in **Fact Books** and other statistical reports prepared by APTA and its predecessor organizations. Many data items are reported for every year beginning in the 1920s and ridership is reported from 1907.

The **Public Transportation Fact Book, Appendix B: Transit Agency and Urbanized Area Operating Statistics**, this volume, presents six operating statistics for each transit agency in size order, totaled for all service modes operated by the agency and in size order for each individual mode. Data are also summed for urbanized areas, both all modes totaled and for individual modes. These lists greatly expand similar data in previous **Public Transportation Fact Books** and allow a simple method to determine comparably sized transit agencies; a difficult task when using existing data sources.

APTA produces additional data reports that provide detailed information about individual transit agencies that are not available from other sources. These reports or information on obtaining these reports is on the APTA web site at www.apta.com. They include:

The **Public Transportation Fare Database**, published annually, report details of individual transit agency fare structures, fare collection practices, and fare collection equipment.

The **Public Transportation Vehicle Database**, published annually, lists all vehicles owned by participating agencies in fleets, that is, groups of identical vehicles manufactured in the same year. Extensive information is included on their propulsion plants, dimensions, and equipment, such as communications and passenger amenities.

The **Transit Infrastructure Database**, published in alternating years, lists all fixed-guideways and stations operated by participating transit agencies. The status of fixed-guideways not yet open is reported and the equipment in stations is detailed.

The **Public Transportation Ridership Report** is published quarterly. Each quarterly edition presents ridership for each of three months plus quarterly and year-to-date amounts for all participating transit agencies. The reported data are used to estimate national total ridership, which is reported for individual service modes and an aggregate total. This report presents a quick indicator of the state of the transit industry shortly after the close of the period being reported.

The **APTA Primer on Transit Funding** presents a detailed explanation of funding programs in federal laws authorizing funding for the transit industry. Detailed statistics report amounts of funds available and the text describes the uses to which those funds may be put and the methods by which they are distributed. A new **Primer** is prepared for each authorization of transit law and they are updated annually to reflect annual appropriations of federal funds for transit.

A Profile of Public Transportation: Passenger Demographics and Travel Characteristics Reported in On-Board Surveys is an extensive investigation of the demographic characteristics and travel behavior of transit passengers based on surveys conducted by transit agencies of passengers traveling on-board their vehicles.

Extensive data for individual transit agencies can be found at the Federal Transit Administration's **National Transit Database (NTD)** web site at <http://www.ntdprogram.gov/ntdprogram/>. NTD data are presented in summary format for each transit agency and in tabular format for specific data categories, such as revenue sources or operating characteristics, with all transit agencies shown in alphabetical order by state and agency. A glossary and additional background material are available on the web site. Archived data for prior years are included.

TABLE OF CONTENTS

GLOSSARY

MODE OF SERVICE CODES AND DEFINITIONS:

Mode is a system for carrying transit passengers described by specific right-of-way, technology, and operational features.

AG: Automated Guideway Transit (also called **personal rapid transit, group rapid transit, people mover**) is an electric railway (single or multi-car trains) of guided transit vehicles operating without an onboard crew. Service may be on a fixed schedule or in response to a passenger activated call button.

AR: Alaska Railroad is the Alaska Railroad with operations similar to commuter rail service.

CC: Cable Car is an electric railway with individually controlled transit vehicles attached to a moving cable located below the street surface and powered by engines or motors at a central location not on board the vehicle.

CR: Commuter Rail is a mode of transit service (also called **metropolitan rail, regional rail, or suburban rail**) characterized by an electric or diesel propelled railway for urban passenger train service consisting of local short distance travel operating between a central city and adjacent suburbs. Service must be operated on a regular basis by or under contract with a transit operator for the purpose of transporting passengers within urbanized areas, or between urbanized areas and outlying areas. Such rail service, using either locomotive hauled or self propelled railroad passenger cars, is generally characterized by multi-trip tickets, specific station to station fares, railroad employment practices and usually only one or two stations in the central business district. Intercity rail service is excluded, except for that portion of such service that is operated by or under contract with a public transit agency for predominantly commuter services. Most service is provided on routes of current or former freight railroads.

DR: Paratransit is a mode of transit service (also called **demand response** or **dial-a-ride**) characterized by the use of comprised of passenger automobiles, vans or small buses operating in response to calls from passengers or their agents to the transit operator, who then dispatches a vehicle to pick up the passengers and transport them to their destinations. The vehicles do not operate over a fixed route or on a fixed schedule except, perhaps, on a temporary basis to satisfy a special need; and typically, the vehicle may be dispatched to pick up several passengers at different pick-up points before taking them to their respective destinations and may even be interrupted en route to these destinations to pick up other passengers. The following types of operations fall under the above definitions provided they are not on a scheduled fixed route basis: many origins-many destinations, many origins-one destination, one origin-many destinations, and one origin-one destination.

DT: Paratransit – Taxi is a special form of demand response operated through taxicab providers.

FB: Ferry Boat is a transit mode comprised of vessels carrying passengers and/or vehicles over a body of water, and that are generally steam or diesel-powered. When at least one terminal is within an urbanized area, it is **urban ferryboat** service. Such service excludes international, rural, rural interstate, island, and urban park ferries.

HR: Heavy Rail is a mode of transit service (also called **metro, subway, rapid transit, or rapid rail**) operating on an electric railway with the capacity for a heavy volume of traffic. It is characterized by high speed and rapid acceleration passenger rail cars operating singly or in multi-

car trains on fixed rails; separate rights-of-way from which all other vehicular and foot traffic are excluded; sophisticated signaling, and high platform loading.

IP: Inclined Plane is a railway operating over exclusive right-of-way on steep grades (slopes) with powerless vehicles propelled by moving cables attached to the vehicles and powered by engines or motors at a central location not on board the vehicle. The special tramway type of vehicles have passenger seats that remain horizontal while the undercarriage (truck) is angled parallel to the slope.

LR: Light Rail is a mode of transit service (also called **streetcar**, **tramway**, or **trolley**) operating lightweight passenger rail cars singly (or in short, usually two-car or three-car, trains) on fixed rails in right-of-way that is not separated from other traffic for part or much of the way. Light rail vehicles are typically driven electrically with power being drawn from an overhead electric line via a trolley or a pantograph; driven by an operator on board the vehicle; and may have either high platform loading or low level boarding using steps.

MB: Bus is a mode of transit service (also called **motor bus**) characterized by roadway vehicles powered by diesel, gasoline, battery or alternative fuel engines contained within the vehicle. Vehicles operate on streets and roadways in fixed-route or other regular service. Types of bus service include **local service**, where vehicles may stop every block or two along a route several miles long. When limited to a small geographic area or to short-distance trips, local service is often called **circulator**, **feeder**, **neighborhood**, **trolley**, or **shuttle service**. Other types of bus service are **express service**, **limited-stop service**, and **Bus rapid transit (BRT)**. Data for all of these types of bus service are included in the bus mode on these historical data tables. Disaggregated data are not available for any of the bus service categories.

MO: Monorail is an electric railway of guided transit vehicles operating singly or in multi-car trains. The vehicles are suspended from or straddle a guideway formed by a single beam, rail, or tube. Their most common use is in the non-transit settings of amusement parks. If the trains do not have an onboard crew, they are considered automated guideways.

PB: Publico is a mode similar to jitney, operated solely in Puerto Rico, which is comprised of passenger vans or small buses operating with fixed routes but no fixed schedules. Publicos are a privately owned and operated mass transit service which is market oriented and unsubsidized, but regulated through a public service commission, state, or local government. Publicos are operated under franchise agreements, fares are regulated by route, and there are special insurance requirements. Vehicle capacity varies from 8 to 24, and the vehicles may be owned or leased by the operator.

TB: Trolleybus is a mode of transit service (also called **trolley coach**) using vehicles propelled by a motor drawing current from overhead wires via a connecting pole called a trolley pole from a central power source not on board the vehicle.

VP: Van Pool is comprised of vans (and very rarely, small buses and other vehicles) operating as a ridesharing arrangement, providing transportation to a group of individuals traveling directly between their homes and a regular destination within the same geographical area. The vehicles have a minimum seating capacity of seven persons, including the driver. It is considered mass transit service if it is operated by a public entity or is one in which a public entity owns, purchases, or leases the vehicle(s). Vanpool(s) must also be in compliance with mass transit rules including Americans with Disabilities Act (ADA) provisions, and be open to the public and that availability must be made known. Other forms of public participation to encourage ridesharing arrangements

such as the provision of parking spaces, use of high occupancy vehicle (HOV) lanes, coordination or clearing house service, do not qualify as public vanpools.

OPERATING STATISTICS:

Vehicles Operated Maximum Service is the largest number of vehicles in operation in revenue service (i.e., the time when a vehicle is available to the general public and there is an expectation of carrying passengers) at any one time, typically during the morning or evening peak period or rush hour on a weekday.

Vehicles Available for Maximum Service are vehicles that a transit agency has available to operate revenue service regardless of the legal relationship through which they are owned, leased, or otherwise controlled by the transit agency. Also called **revenue vehicles owned and leased**.

Vehicle Revenue Miles are the miles traveled when the vehicle is in revenue service (i.e., the time when a vehicle is available to the general public and there is an expectation of carrying passengers). Vehicles operated in fare-free service are considered in revenue service. Revenue service excludes school bus service and charter service. For conventionally scheduled services, vehicle revenue miles are comprised of running miles available to passengers only; "deadhead" miles are not included.

Vehicle Revenue Hours are the hours traveled when the vehicle is in revenue service (i.e., the time when a vehicle is available to the general public and there is an expectation of carrying passengers). Vehicles operated in fare-free service are considered in revenue service. Revenue service excludes school bus service and charter service. For conventionally scheduled services, vehicle revenue hours include running time and layover/recovery time.

Unlinked Passenger Trips is the number of times passengers board public transportation vehicles. Passengers are counted each time they board vehicles no matter how many vehicles they use to travel from their origin to their destination and regardless of whether they pay a fare, use a pass or transfer, ride for free, or pay in some other way. Also called **boardings**.

Passenger Miles is the cumulative sum of the distances ridden by each passenger.

SMALL SYSTEMS:

The NTD now allows systems with 30 or fewer vehicles operating non-fixed guideway service to submit a reduced amount of information to the database. In the service module, these systems report Vehicles Operated at Maximum Service, Vehicle Revenue Miles, Vehicle Revenue Hours, and Unlinked Passenger Trips. They do not report Vehicles Available for Maximum Service or Passenger Miles.

In the tables, small systems are indicated in the small systems column with a 'Y'.

On the Urbanized Area Totals and Urbanized Area Modal Totals tables, the small systems column indicates whether the Urbanized Area contains any small systems - indicating that the Vehicles Available for Maximum Service and Passenger Miles data does not include figured for all systems and may not be directly comparable to the other data.
